> John,

> I'm putting together a small "sniff" test for the 40X trigger assemblies you mentioned in our conversation last week. I know you're considering possibly using this trigger assembly on varmint and LE product offerings, but I've taken the liberty to also test the trigger assemblies on M/700 long actions as well as M/7s to evaluate their performance on those two platforms. Using the trigger assemblies on the M/7 will require new safeties, but I should be able to come up with those from parts we have on-hand.
