great - thanks

Please give me the project number so I can transfer the expense report charges to it. thanks

>As you know, we submitted samples to the FBI for their new Sniper Rifle proposal. There are two phases of testing the products go through. The first is primarily a measurement procedure and drop testing which we will be through within the next few days we think. The next phase is a 5000 round endurance test on two guns which we are required to assemble a team for the shooting portion. Logically, I believe it would be of benefit for your folks (Armorer's School) to field the team if possible. I have a project set up to charge the expenses incurred for the submission, so I am sure we could work out that part of it. The trick is going to be timing. We could be notified at any time to come up to Quantico. Basically, you are looking at a week's worth of shooting for 3-4 people, Foster being one. We could likely assemble a team from outside Remington, but I believe it would be advantageous for your folks to get involved on the front end. Give me a call when you get a chance to discuss.

>In preparation for the endurance test firing of 2 of the rifles at the FBI, please advise me on who will assist me in doing this (assuming we get to). Based on Tom's response we are probably looking at 4-5 days of shooting with 3 - 4 people. I don't know if anyone from IBA can assist but the direction needs to come from your office.
