Subject: 300 WIN MAG TESTING HELP

Matt & Danny,

Per a discussion Gary and Jim had this morning concerning the testing of the 300 WIN MAG, the tests are held up in the lab due to scheduling. An answer was due June 3.

The testing is to verify the rifling is repeatable, to verify the differences heat treat properties in the Ilion samples versus the Etown samples, and the verify the rifling dimensions.

Matt, you have indicated it is imperative for Mayfield to finish barrels by month's end. Danny, Jim, & Matt, who do we need to work with to get an expedited answer.

Let me know as soon as possible.
