John, I agree with your concerns. Attached you will find the first cut at the timeline for the 710 modular stock. The timeline has the following key points:

R&D will provide the first 710 modular stock prototype for review in mid Jan/06. This prototype will be modular in 5 sections, with the overall look similar to the current 710 with out the current fore-end sink. The prototype in January is the first milestone, Review 1, and a starting point for the development cycle. The CAD files Created by January will be used for tooling quotes (4wks) and CAR work & approval (5 wks) while we continue with the development work.

As we work through the development, R&D CAN provide a number of 710 modular prototype samples to review, one every 20 days if needed, without affecting the overall timeline until the CAR is signed. The Final prototype Review and Approval by marketing can be as late as April 28, 06.

Please review and let me know of any concerns.

Thanks,

Will

You guys have to get me a timeline on this project. With the number of projects we have in the air right now, getting e-mails requesting finalization on something before December 16th is not what we need to work by. Please, as we discussed, get me a timeline so we have some sort of methodology to follow here. When we talked last week, January was when styling was needed to be put to bed. We can't operate this way on a program like this. It needs to be buttoned up with specific parameters established.

Subject: M710 styling.

John,

I heard you were working on a styling plan for the M710 for 2007. We need to complete the modeling in December to meet our commitments on the project, so whatever styling input you want us to follow, we would like to get something going on it soon. We want to provide what you're looking for both in content and timing, so that's why I'm writing now. Will we be in a position to review your styling input before, say Dec 16th? Can we help?

Todd
