**Subject:** RE: SPL Side Plate

We do not want to scrap any of the SPL components at this time.

Do we not want to scrap them now because we think we will never use them in the future? If we can never use, my vote is to disposition the parts now.

Scott,

Per the discussion at the SPL meeting last week, if MIM has these completed, transfer them to ILN, we will hold the inventory. Engineering does not want to scrap these off the system as of yet. If they are still in process in MIM, you will hold them.

Karen,

Please move these into 25QH and mark the parts "Hold for Disposition - Jim Doolittle & the date".

Rich,

These will eventually be charged against the SPL project because of the design change. Is there an advantage to post this in 2005 or 2006?

Jim,

Are there additional parts in your control we should be moving also?

John

We have 14,764 Left Hand Side Plates completed and I am looking for some direction on what to do with them. It is my understanding that we will not be using them for the new fire control. Should I ship or scrap? If I scrap here, do you have a charge number to scrap against?
