Dear Sir,

The safety switch on the Model 710, as well as the Model 700 and Model
Seven, has an audible click. This is a design feature of these firearms.

The safety release on my new 710 makes a loud click when it's released.
Not noticable in the store where I purchased it, but quite obvious in the
quiet of my shop.
I'm concerned it may spook a buck within hearing range.
How can it be silenced????
