Hello My name is Patrick zips. I have enjoyed Remington firearms for 14 years and never had a problem with any of them. Unfortunately I have a minor problem now that you might be able to help me with. On the trigger assembly of my 30-06, the spring clip that applies pressure to the detent ball of the safety mechanism has a broken tab. This allows the spring clip to move freely and not as a unit with the safety as it should. The safety has no positive stop position either on or off. Is it possible for you to give me price and availability on the spring clip. My only other alternative is to keep moving one from one of the other guns. Any help or suggestion you can offer is welcome. Thank you for your time.
