Has there ever been a problem with accidental firing of the model 700 due to any type of malfunction of the bolt assembly? The reason I ask is that this happened to me, luckily resulting in no injuries. A friend of mine mentioned that there was a recall of the model 700, but I was reluctant to believe this. Can you shed some light on this? In my opinion, no better rifle exists and I own three of differing calibers.
Thanks for your time,
