Dear Mr. Magiera,  
Thank you for your inquiry. Model 600 and 660 rifles - except those with a serial number beginning with an "A" before the serial number - were subject to the 1979 recall. Since your serial number begins with the letter "A", it would fall under this exception and is not included in the recall. If you send the firearm in for the Safety Modification Program and the trigger is out of factory specifications, they will replace the trigger assembly. If you have any questions, please feel free to contact us at 1-800-243-9700.

In reading your site on the recall, am I correct in reading that this particular rifle is NOT inclusive in an earlier recall? Also, if I send it in to have the safety modified to permit unloading with the safety on, do I need to remove the scope?  
Another thing, I had the trigger pull lightened by a gunsmith years ago, would this trigger mechanism be replaced? If replaced, would your pro adjust the trigger to what it is presently? Is a hinged floorplate available for this model somewhere?  
Is there a laminated or composite stock available for the 600?  
This gun is a real good shooter and I've learned to live with its' unloading fault by keeping it pointed in a safe direction while unloading and not fully chambering the rounds in the magazine to unload it. The trigger is very light and breaks like a glass shard.
