Dear Mr. Johnson,  
We regret that you experienced a problem with your firearm. According to  
the repair, the factory replaced your trigger assembly with a new one.  
The new style allows you to open the bolt with the safety on.

I sent my rifle back to the factory last fall after I had an accidental  
discharge when I moved the safety to the fire position. Cleaning and  
repairs were done to the rifle and all appears OK. Prior to the repair in  
order to operate the bolt the rifle had to be in the fire position. I  
found that I can now operate the bolt to unload while the safety is on. Is  
that a modification or is there something again wrong with the rifle?

Thank you,  
Gene Johnson
