Would you please give me information on the bolt lock safety on your model 700 rifles?

I am wanting to have a custom built rifle made on one of your 700 actions, my gunsmith said to find one without a bolt lock safety. Would you please tell me what it is-does, when did you start putting them on the 700, date wise and serial # wise. What would be the easiest way to tell if one has it or not? Because a lot of people that I ask if it has one or not, don't seem to really know what I am asking and I'm afraid I don't either. Thank you for any assistance you can give on this problem..
