Dear Mr. Foster,

Thank you for contacting Remington Country. Your Model 700 was manufactured in 2001. If you are inquiring on the bolt-lock safeties, you do not have a bolt-lock safety, where you would have to put the firearm on fire before you could open the bolt. You have the new style safety, so that you can open the bolt with the safety on.

If your question is regarding the ISS safety located on the bolt plug, your model should have the ISS safety that enable you to lock the bolt so that it cannot be put in the chamber and lock down.

I have this weapon in 7MM Rem Ultra Mag calibre. Is it Long Action (pre-locks) or Long Action (new-locks)?

Thank you for your quick response,

Johnny Foster
