Thank you for your reply. You should have the gun inspected by a reputable gunsmith to determine whether or not it is safe to shoot. If the gun is in safe condition then you should be able to use modern factory loaded ammunition, using reloads would be at your own discretion. We would suggest that you review the information found on our homepage in the Safety Center entitled "Bolt Action Safety Message: Safety Modification Program for certain pre-1982 rifles " if you have questions about this program.

I still would like to know if this gun is capable of shooting the bullets that are on the market today - for instance light mag. 30-06 150 gr. Gun was checked to be still in good shape as far as I know. Are there any problems with this make that could surprise me? I have heard of safety problems?? Also I do some reloading and could use some information for this in the future. Can I use the same reloading data for today's 30-06 rifles? What loads can it handle safely? (thinking technology make have changed in 45 years) Thank you very much for responding Norm. Am looking forward to hearing from you again. Dennis Brown ~Thanks Again!
