Thank you for contacting Remington Country. Your rifle was originally installed with a bolt-lock, which means you have to put the safety switch on fire before you can open the bolt. We are offering a conversion at a special price if you would like your firearm converted, so that you can open the bolt at anytime with the safety on safe. I own a Model 721 (30.06) and recently read a report regarding the trigger safety being defective and firing when unloading. Apparently people have been injured. I need to know details regarding this problem and where it can be repaired. Is there a company warranty involved? I cannot have a rifle that is unsafe. Your assistance would be greatly appreciated.
