Dear Norman,

Our current non-bolt lock safety is a different design than the bolt lock style that we used prior to 1982. It does allow the gun to be loaded and unloaded while the gun is on safe. This does not mean that the previous design was "dangerous". Please see the #1 commandment of gun safety below.

The descriptions of our gun types are listed below. We are also sending our 2004 full line catalog to your address. We hope this information is helpful and we appreciate your loyal support of Remington products.

ADL-Model 700 without a floor plate. Top load only

BDL-Model 700 with a floor plate. Top and bottom load

CDL-"Classic" deluxe-our new offering that is fashioned after our Remington Classic. Please click on the link below for a closer look.

Always keep the muzzle pointed in a safe direction.

This is the most important gun safety rule. A safe direction is one in which an accidental discharge will not cause injury to yourself or others. Never allow your gun to point at anything you don't intend to shoot. Be especially careful when you're loading or unloading. Treat every gun as if it were loaded. And make it a habit to know where your muzzle is pointed at all times, even when your firearm is unloaded.

No one will be injured by an accidental discharge if you keep your firearm pointed in a safe direction. It's as simple as that.

Please tell me what ADL,BDL,CDL, etc. mean? Also, if I purchase a used mod.700 how can I be sure that it doesn't have the dangerous trigger/safety of earlier designs? Thank you very much, Norman

ps: would like to have a new catalog with retail prices if available.
Thanks
