Rem Model 600 Twist Rate

Discussion Thread

Response (Norm)
Dear Bill:

3/5/2004 10:37:16 AM

Thank you for visiting Remington Country. The Remington Model 600 Bolt Action rifle was introduced in 1964 and discontinued in 1967. We made approximately 95,000 of these guns during this time. According to the information that you provided, your Remington Model 600 was produced in or around 1964. The rate of twist on the Model 600 in a Gumma carliber should be 1:9 which indicates it will stabilize heavier bullets in that caliber. We would suggest that you review the information found on our homepage in the Safety Center entitled "Bolt Action Safety Message: Safety Modification Program for certain pre-1982 rifles."

Customer (Bill Bevers) 3/2/2004 5:09:06 PM What is the twist rate for a Model 600 6mm rifle? How will it shoot the new small 55 gr 6mm bullets? Do you have any other info on my model 600 sn 16305? I have requested a manual.
