Thank you for contacting Remington Country. We can check for any call-back information on your rifles with the serial numbers if you will forward those to us.

Rifles produced before around 1982 were originally installed with a bolt-lock, which means you have to put the safety switch on fire before you can open the bolt. We are offering a conversion at a special price if you would like your firearm converted, so that you can open the bolt at anytime with the safety on safe. To view more details regarding this modification, go to:

I have read about an issue with the model 700 safety. Could you tell me more about this subject - I have an older syle 700 BDL in .243 and just bought a 700 BDL mountain rifle in .270. I hunt with my wife and daughter and want to be sure I'm as safe as possible, so if I need to send in the older model for inspection let me know.

Thanks,  
M.J. Doyle
