Dear Wayne,

In 1982, market demand forced us to change to a non-bolt lock style safety. We have a safety modification program in place today for owners of older Model 700's WANTING this type safety. Unfortunately, you are in the minority of those who appreciate the benefits of the bolt lock style safety. We truly regret you missed your deer. Remember to keep safety first and enjoy your adventures in Remington Country!

How come when you put the safety on. The bolt will not lock in place. There have been several times that I have had the safety on while walking in the field. Some how or the other the bolt gets bumped and is open a little bit. Not knowing this when you release the safety if you do not check the bolt you will not fire a round off. I missed a nice deer this year because of this.
