Thank you for your question. If treated responsibly this should be safe but if you would like to take advantage of the safety modification. This would be on our website on the home page in red lettering, or you can call us at 1-800-243-9700.

I have a Model 700 that still has the bolt block that will not allow me to unload the gun unless the safety is clicked off. Is this dangerous if treated responsibly?
