Subject: J lock keys

In going thru our \$25.00 challenge meetings a point was brought up that with each gun we manufacture we include 2 keys. The projected consumption on the keys is roughly 587000 at \$ 0.40 each for the year. By going to one key we could have an annual savings of about \$117,400 or .040 per every common fire control type gun. What are everyone's thoughts? The guns leave here unlocked. Please let me know.
Thanks
