Good to hear from you, Scott. I have highlighted in red the projects that the shotgun business is most interested in. In addition, I have added some suggestions of my own (highlighted in blue) and prioritized the top 7 projects with a number off to the left. I hope this helps you with what the shotgun priorities are. Obviously, the most immediate needs revolve around supporting information for the upcoming Model 2100 launch. In that regard, a competitive auto shotgun audit, auto shotgun recoil quantification and a study of Enidine life cycle claims tops the list.

Many thanks.

Ed

Ed and John,

I'm looking for input on activities for the Research & Technology group for next year. The attached list was put together by the group. There's not a lot of detail but I'm sure you can get a flavor for what they're about. Please review this list and identify the projects you have the most value for. Feel free to propose your own activities as well. As you both know, a good way to get things like the "Recoil Simulator" done on someone else's budget!

Thanks for your input,
Scott
