Mr. Dennis Sanita,

I am writing you about our phone conversation on 1-11-94 concerning the problem that I had with a 700 Remington. I had told you, that I had bough it a few years ago. My wife told me that it has been more like four years ago. It was bought at K-Mart in Eunice, La. just before it closed .

Back to the problem with my rifle, I was standing at the rear door of my truck using the cab light to load the rifle. After putting the four cartridges down in the magazine, I pushed the bolt forward and went to push it in the lock position the rifle went off going threw the roof of the truck. I then went to the front of the truck and went threw the action three times to get all of the cartridges out of the rifle, it did not go off anymore. I did not think that my son should use the rifle so I let him use my 7600 /270 and I used the 700/243 with the utmost respect. The 700/243 has never been taken apart for any reason. I don't have any ideal why the rifle did what it did. I do know that it scared me to death.

We had talk about if the problem was with the rifle, That you could trade the 700/243 for a 7600/243 This would make me feel a lot better when I let my son uses this rifle.

Thank You,

Dee Brown
