To Whom This May Concern,

I purchased a 700 BDL - 7mm Mag rifle, serial no. B6878895, in March (24th) 1989, from Shooters & Anglers, in Rosperck, N.Y.

This year, I hunted in Northern Quebec for Caribou. I was unloading... I pushed the safety off it felt hard to push off... the rifle fired! The safety is not working properly. (Thank God no one was near me, when the rifle went off!)

I also went hunting in November with the 7M, and had the same problem with the safety. I had to leave the chamber empty, until I was ready to shoot. When I'm alone I leave the safety off.

I've never had any problems with any of my Remington products. I would appreciate your letting me know ~~who~~ how to have this problem with the rifle fixed. I'll be waiting to hear from you regarding this matter.

Thank you,
Anthony Cupone
