Remington Arms.

Sirs,

I am writing in regards to a notice concerning recent model 700 rifles manufactured between 7/87 and 12/87.

I have purchased three rifles during this period. as listed

- ① Rem. Classic 7mm mag A 6572220
- ② Rem. Classic .338 mag B 6876068
- ③ Rem. BDZ 30.06 B 6815871

Of these the only one I have used is the 7mm mag this past Jan 88. I experienced a problem with it. I was hunting with a round in the chamber and the safety on, when I released the safety as it clicked off the rifle fired without touching the trigger.

Can you tell me what could cause this problem and also if any of these rifles present a danger.

Thank You
L. J. ...
