#### REPORT OF AUDIOMETRIC EVALUATION

NAME: CHATTIN, THOMAS  
10511 Kirkvale  
Houston, Tx 77089

DOB: 9-8-46

Dear Dr. Friedman:

Your patient, Thomas Chatten, was evaluated by the Audiology Service of Texas Children's Hospital on 1-22-92. Results were as follows:

RIGHT EAR: Mild sensorineural loss from 1000 - 3000 Hz. Sensitivity remains essentially unchanged since the previous hearing evaluation of 9-25-90.

LEFT EAR: Mild to moderate high frequency sensorineural hearing loss beginning at 1000 Hz. Sensitivity in the higher frequencies (4000 Hz - 8000 Hz) has decrease since the previous hearing evaluation of 9-25-90.

Acoustic immittance measures are consistent with normal middle ear function bilaterally.

#### RECOMMENDATION(S):

Audiologic evaluation in six months to monitor sensitivity. Mr. Chatten deferred amplification at the present time.
