

I have also included two (2) once fired cases that show you another problem I am having. It seems that with a moderate reload :- 42.0 Grains of H3E0 powder, A Nosler 150 Gr. Ballistic Tip bullet and a Federal 210 Match primer the primers will pop out of the case. (See enclosed rifle cases) My thinking is that there could possibly be a headspace problem ?

I would appreciate very much if you would give this gun a complete inspection and correct any problem that there might be. I feel that possibly there might still be a problem in the Trigger Assembly of the Model Seven rifle that should be corrected.

Your prompt and courteous attention to this letter will be appreciated.

Sincerely  
William Cinti
