Dear Sirs:

RE: REMINGTON Model 600
Serial # 43565

We bought this gun new in 1967 .

The gun was for my wife and on a hunting trip, the day we bought it, my wife was loading it in our camper. Without pulling the trigger, the gun discharged and shot a hole in the side of the camper.

Years later I read in the Rifleman of a recall on this model. I phoned you and was advised to take the gun to Simms Hardware in Sacramento. They examined it and returned it saying there was nothing wrong with it.
La

Later I loaned the gun to my Brother-in Law while he was visiting us. When we returned we found a hole in the ceiling of our living room. He said while loading the gun, and without touching the trigger the gun had discharged..

I returned the gun to Simms Hardware on 5-5-82. Six months later after several calls to them, I finally went down and picked up the gun on 11-5-82. They offered to send it to the factory, but I thought if they could lose the gun for 6 months at the store it would be gone for good if they sent it away. Because the gun has twice accidentally discharged.. my wife is afraid to use it so it has sat idle since we got it.

Pursuant to my phone conversations this date to Laurie and Ed Joy, I am returning the gun for repair at no cost under the Model 600 RECALL program.

PS. I checked gun this morning - Firing Fire accurately but trigger pull extremely light!

Sincerely

Duane Coombs
