

hunt deer & the weather was cool  
& dry (35°F) and at 7:15 am  
I was aiming at a deer & when I  
pulled the trigger it did not move.  
I continued to squeeze but nothing  
on the trigger moved. I checked  
the safety & it was off. As I  
pointed the gun at a tree with my  
finger off the trigger it went  
off by itself. I then ejected the  
shell (bolt action) and chambered another  
and when I closed the bolt with  
my finger away from the trigger  
the gun went off again. I guessed  
the trigger stuck in the fire position.  
I then cleaned the weapon & called  
it a day. Going straight to Edlums  
Sporting Good in Wayne N.J. to  
purchase another rifle because I am  
going on a hunting trip 4 days later  
& do not trust the gun.

I purchased another Remington  
700 BDL 30-06 cause I really like  
the gun. As you can see the rifle  
that I shipped to you is in the  
box of my new gun purchased on 11-22-00  
I called Remington Consumer Affairs  
in Delaware & spoke to the party
