

it hasn't been fired more than five or six boxes of shells. Other words it isn't worn out or anything and the bolt is still tight. - What I want to know is could I send the bolt assembly in and possibly ^{repair or} get a new one and if so how much will it cost me. P.S. no part of the rifle or bolt assembly has been worked or tempered with. A friend of mine suggested I send the whole rifle in, but as I already mentioned the freight is expensive and I don't have the proper shipping carton to send it in. What must I do? I remain very Truly Yours
