

Springfield Armory Calls It Quits

BY DAVID H. HARRIS

With the passage of the year of the 100th anniversary of the Springfield Armory, the company has decided to close its doors. On November 14, 1993, Springfield Armory will cease to exist.

At the time of its closing, Springfield Armory employed 11 workers. The company's last day of operation was November 14, 1993. The company was founded in 1877 and the other 95 were founded jobs with a new company called Springfield Inc., which acquired the 95 employees. Dennis Reese, who worked at the Springfield Armory for 20 years, said that the company was founded in 1877.

Reese said that the company had been in operation for 116 years. He said that the company was founded in 1877 and the other 95 were founded jobs with a new company called Springfield Inc., which acquired the 95 employees.

When asked about the future of the company, Reese said that Springfield Armory had not yet decided what to do. He said that the company was founded in 1877 and the other 95 were founded jobs with a new company called Springfield Inc., which acquired the 95 employees.

The Springfield Custom Shop, a company specializing in customizing Springfield P-9 and P-99 handguns, was closed for two weeks following the announcement. Of the 15 gunsmiths working there, only five were retained for future employment according to shop manager Jack Weigand.

All the members of the Springfield Armory were asked to return their guns and released from service. Reese said that the company was founded in 1877 and the other 95 were founded jobs with a new company called Springfield Inc., which acquired the 95 employees.

Lawyer's Newsletter Addresses Remington 700 Safety Problem

According to the *Firearms Litigation Newsletter*, the legal world is marshaling its forces for a major attack on Wilmington, Del.-based Remington Arms. The newsletter states: "The Remington Model 600 and 700 Bolt Action Rifles have both been known to fire without a trigger pull. These unintended firings can be caused by the Walker Fire Control System utilized in both guns."

"The heart of the defect in the Walker ... system is the unique portion of the design on which the Walker patent was based — the trigger connector. The failure of the trigger connector to do its job allows weapons which employ the Walker system to fire without a trigger pull upon release of the safety."

"The Walker fire control system of the Remington Models 600 and 700 can cause a misfire under various circumstances. The most common malfunction is a 'Fire on Safety Release' (dubbed FSR by Remington) in which the rifle fires as a result of disengaging the safety. In essence ... the safety acts as a hidden second trigger."

The article goes on to state, "The Walker patent itself warns of this danger: 'It is essential that the safety means be so arranged that an inadvertent operation of the trigger while the safety is in 'safe' position will not condition the arm to fire upon release of the safety.'"

Because the Model 600 was a cheaper version of the 700, Remington felt quality control was more difficult to control, which meant the guns were more likely to malfunction. Remington recalled the Model 600, but not the 700, although the design was basically the same.

The article states, "In early 1979, Remington admitted that approximately 1 percent of its Model 700s (its own estimate) were susceptible to firing on safety release. Yet, because there were over 2 million Model 700 rifles in the field at that time and because (of) the self-serving estimate of the incidence of malfunction, Remington did not recall the Model 700... (By Remington's estimates) there were 20,000 defective rifles in the public's hands in 1979, and 30,000 today."

"Remington is clearly aware that its bolt action rifles are susceptible to inadvertent firing... Despite admitted (design flaws) Remington specifically elected not to recall the Model 700. Remington also opted not to warn of the possibility of inadvertent discharges."

There are several lawsuits pending against Remington in regards to this problem.

BUCK STOP

PAUL CARDINALE
Buck Stop Professional Sales Rep
Paul J. Cardinale & Associates

"East Coast hunters are a pretty savvy bunch. They know what works and how to stick with it. That should tell you something about why Buck Stop scents and lures are so popular around here. Hunters have come to expect the best from Buck Stop, and they aren't disappointed. Season after season, Buck Stop's the one they ask for."

Call Paul directly at (201) 697-7279 for the complete Buck Stop line in the following states:

Delaware • Maryland • New Jersey
Pennsylvania • Washington D.C.

Effective As The Day Is Long —
Buck Stop's new time release
