This note is about a model 700
Remington B.D.L. 243 cal. rifle
S.N. 346854. I spoke with you a
few days ago and here are the details
you requested. Last year in december
this gun fired when the bolt was
being locked down by my wife. I
just could not believe that it
malfunctioned. This year on november
the 11th I was loading this rifle and
when I locked the bolt down it
discharged doing damage to our truck
and scaring us very much. This
rifle has only done this two times. I
believe the gun could kill someone!!
I took the gun apart to see if I
could find a broken or badly worn
part. I did not see any thing out
of the ordinary, but I am not a gun-
smith. Your help in eliminating the
malfunction & danger will be most
appreciated.

Thank you.
