

experienced no difficulties, even though I shudder to think of all the times in tree stands that I eased the safety off and the potential for a deadly surprise.

The rifle first malfunctioned at a local rifle range (Keithville Rifle and Pistol Club), of which I am a member. I was on the firing line and informed my friend, Dr. Ricky Jones that I would give warning before firing to allow him to put on hearing protection. I was more surprised than he when I pushed the safety off and the gun fired. Only safe shooting habits practiced by me prevented a potential tragedy. I then deliberately loaded one more round, pointed at the target, and pushed the safety; again the rifle fired. Since that time I have demonstrated to several people that the rifle will dry-fire 100% of the time when the safety is taken off.

I am an avid hunter who prides himself on taking care of my guns. This is evident in the current condition of the gun I am returning to you. I have hunted with this rifle in Louisiana, Texas, and Mississippi. However I would always be uncomfortable with this rifle and model. Therefore I am requesting a full refund on the rifle and scope base (which would be of no further use to me). I have attached an estimate from the same place I bought the original rifle.

Your cooperation in this matter will allow us to end this unfortunate incident without further action. If you have any questions feel free to call me at: work 318-459-6603 or home 318-687-0472.

Sincerely

Jack Pace
