

2-13-89

Dear SIR,

This rifle has had a history of firing without pulling the trigger. It will fire when the safety is pushed to the ~~fire~~ ^{safe} position and it will fire when the bolt is closed. Several things have been done to correct this.

1. Adjust the trigger travel & trigger pull pressure screws.

2. Reinforce the springs in the trigger.

They did not eliminate the danger of accidental firing.

The rifle is unsafe and has been unsafe from the time of purchase.

The safety and its design is the problem.

Please Repair or Change it or Replace it.

Thank You,

Jimmy Raines
