

To: whom it may concern; 4/11/91

My Remington Model #700 Rifle has fired three (3) times when I've switched the safety lever from safety to fire. No pressure was being applied to the trigger as this occurred. The rifle has never been dropped nor has it ever been hit with anything to cause such a dangerous malfunction. I am to the point where I can no longer trust my rifle until it is working properly.

Thank You
