LaFayette, La. 30728

Dear Sir:

I am returning this rifle for repair.

Serial # C6521897.

Problem #1. Rifle doesn't shoot a tight group. (See enclosed target). Any good rifle should shoot a $1\frac{1}{2}$ inch group at 100 yds. I own three other rifles, all Remingtons, they shoot near a inch at 100 yds. This one should to.

Problem #2. Firing pin falls when you close the bolt. It sometimes falls when you push the safety off.

Also would you please set trigger at four pound pull.

I purchased the rifle on 7-6-91 and have fired it approx. 50 times. I tried several different loads, including factory rounds. It never group well with any of them. I was shooting groups to send to you when the firing pin started falling. I stopped shooting!

Thank-you
Serry D. Rodgers
