

the casings split. Mr Martin
misplaced the original casing
that split on me but enclosed
2 of the casings he shot. Mr
Martin recommended that I send
the rifle back to the factory. It
was his opinion that the lot of
shells was defective but ~~has~~ has
damaged the barrel which needs
replacing. The spring and shell
feeder plate (I'm not sure of the names
of the parts) were blown off. The bolt
now freely comes out completely.

Please perform needed repairs.

I realize the gun's warranty has
expired years ago but the gun has had
less than 5 boxes of shells shot and
was in perfect condition until the
accident. I have 4 other Remington
firearms and will certainly buy more
