

To Whom It May Concern :

I am sending this gun back to Remington. The reason is because it discharges sometimes. The gun was bought in 1985. I have shot the gun about 100 hundred times. It does not happen all the time. It has discharged once in a pickup. Twice it discharged in the woods. It discharges when you take it off of safety to shoot or to remove the bullets. I have not used the gun in about 18 months. It's a good gun and I would like to have it fixed. The barrel also has a spot on it where the bluing has been removed by something.

Thank you,
Roy Stokes
