DEAR SIRS,

TWO YEARS AGO I PURCHASED A 700 BDL L.I.
7MM MAG. FIRST SEASON OUT HARVESTED A 28"
SPREAD 4X4 MULE DEER AND A 4X5 BULL ELK.

LAST YEAR, OPENING MORNING HUNTING IN COLORADO,
I HAVE A HUGE BUCK & FOUR DOES ON A HILLSIDE,
I SLID UP BEHIND A LOG, CLICKED OFF THE
SAFETY AND IT WOULD NOT FIRE. TOOK IT APART,
PUT IT BACK TOGETHER STILL WOULD NOT FIRE.
BROUGHT IT IN TO A GUNSMITH, REMINGTON DEALER,
HE SAID IT WAS THE SET SCREWS ON THE TRIGGER
SAID IT WAS ALL FIXED. TOOK IT TO THE
RANGE SHOT FIRE. FLEW TO MICHIGAN TO HUNT
WHITTALES WITH MY DAD & BROTHERS. OPENING
MORNING HAD A 4X4 IN FRONT OF ME, IT
WOULD NOT FIRE, NONE OF US COULD MAKE
IT FIRE - NEVER HAD ANOTHER CHANCE
EVEN WITH A BORROWED GUN. BROUGHT IT
BACK TO THE SAME GUNSMITH, HE SAID THAT
THERE WAS NOTHING WRONG - CLEANED &
OILED IT, TESTED IT & IT WORKED FINE.

TOOK IT HOME AND PUT IT IN THE FREEZER
TO TRY & DUPLICATE MY HUNTING CONDITIONS
AND IT WOULD NOT FIRE. BROUGHT IT
BACK AND HE CLEANED THE TRIGGER
MECHANISM WITH A SOLVENT. HE SAID THE
OIL HE USED WOULD NOT (SUPPOSEDLY) FREEZE
UNTIL 50° BELOW. SAME THING, WOULD
NOT FIRE IF PUT IN FREEZER.

NOW, I HAVE A SERIOUS CONFIDENCE
