

I am the original owner of this
 14-700 B&T 30-06 rifle and have taken
 good care of it. Several misfiring incidents
 however have prompted this letter and
 action of the firearm - even though the
 rifle is 10 or 11 years old, only 35 or
 50 rounds have been fired through it.
 Of these 35 rounds, four have been
 fired without pulling the trigger. The
 first incident was when I was loading
 purchased the gun and was loading
 it. The gun discharged while pulling
 a live round into the chamber with the
 bolt. I took it immediately to a gunsmith
 who gave it a brief inspection and told
 me nothing was wrong with it.
 The second and third incidents occurred
 last year while sighting in the scope.
 One round discharged as before and another
 round discharged as I checked the
 safety off. Having down near broken harts
 and fingers on three separate occasions I
 put the gun away until this season. The
 fourth incident occurred yesterday when
 hunting the rifle after hunting.
 The gun fired while taking the safety

Dear Sirs:
