

Remington Arms

I am the owner of four Remington guns

1100 - 12 ga. shot gun

742 - 30.06 automatic

742 - 243 automatic

700 - 30.06 Bolt action

Never have I had any problems with any one but the 700 bolt action I am returning

Since I bought this gun I've had more problems than with all the rest.

Every hunting season its something, either the safety wont work right or the bullets will not feed right.

I've had a licensed gunsmith ~~say~~ fix it each time. This past hunting season it would fire when closing bolt after chambering a round, then the safety would not work, this happened several times

After having this fixed, I find myself not wanting to hunt with it, and not wanting to sell it to any body for fear of getting somebody or myself getting shot.

I have never mistreated any fire arm as you will see by looking at this gun.

My son + several other people in hunting club have never had this problem with their 700 Remington. And will vouch for me on this gun.

DATE

RD6925 REV. 1/94

The oldest 742 I have still performs perfect.
So I'm returning this gun to you and would like
to ask you a question (what would you do with
it?)
