Gentlemen,

I own a Remington Model 788 in 222
Caliber. Serial # 019607 and it's a problem.
When I pull the trigger before letting the safety off
and then let the safety off the gun will discharge.
We had only one accident because of this problem.
I would like to sell the gun but I'm afraid
the new owner will have a major accident.
I can't find a replacement trigger assembly for it.
Will a Model 700 trigger work on the 788.
I may be writing to the wrong people.
Please help me get the information I need.

Thank you
Carl R. Arnold
