REM

Sir

NEW YORK, NY

I have a Remington 700
Cal. 308 SN. 352279

I use the weapon for deer
hunting & have for about 6 or 7
years. On three or four hunting
trips the weapon has discharged
while closing the bolt.

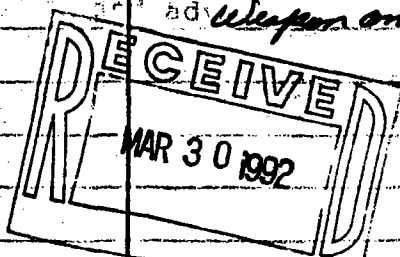

I have always made it a
point to hold the muzzle up
while loading.

This has me upset because
should I forget and have weapon
pointed at someone or at a vehicle
and it should discharge.

Also should someone else pick
it up and load it. This could
be very dangerous.

Please advise me what can be
done to fix this problem, the
weapon only fired 39 to 39.7 grains total.
