

To whom it may concern:

This model 700 BDL 7mm Rem. mag Serial # C6792900
will not chamber a shell.

This rifle was bought several years ago
and was shot only 4 to 5 times to sight it in.
my father left the rifle loaded for
several years before he gave it to me.
when I got it I unloaded and cleaned
the gun. After unloading the gun
the safety ~~was~~ did not move nor could
I fire the weapon without a shell in
chamber (Trigger would not move).

I then without thinking put a live round
in chamber. when I closed the bolt
the rifle went off. After this the
safety and trigger will work. The
problem now is that the bolt will
not close with a shell in it.
