ATTN: Arms Service Division

My Name is Walter M. Docko and on 5/5/95 I called and spoke with someone in the Arms Service Division about a problem I have with my Remington Model 700 30-06 this past hunting season.

On Jan 95 the last day of Deer season I was hunting, I saw several Deer I took my rifle off of safety and fired I missed the deer so I ejected the shell, reloaded and fired again, I missed the deer again so I ejected the shell and reloaded once more to fire.

Upon firing again I hear click so I quickly ejected to see I was out of shells, so I quickly inserted a loose shell from my pocket and tried to fire but the gun was on safety so I moved the button to fire and the rifle went off with out me pulling the trigger, I tried this one more time and the same thing happened
