To whom it may concern:

I am sending a Remington 700, 270 caliber, bearing the serial #C6615115. The first problem with the gun was in hunting season of 1993. Using Remington ammunition the owner squeezed the trigger, but the gun did not fire, after lowering the gun a few seconds the gun then fired on it's own.

The second problem was in hunting season of 1994. Using Federal Classic, 270 ammunition the same thing as described above happened, except it took about one full minute for the gun to fire on it's own this time. It also makes a type of dragging noise when it misfires.

Please call me at (703)896-5700 after checking the gun out, and let me know what the problem is.

Sincerely,

Randall Wayne Depoy
