RE: Model 300 30-06  
377702

This Rifle was purchased by my Father, new, approximately 1972-1974. It has on 4-5 occasions fired when safety was moved from the safe to fire position. It would do this although no pressure was applied to the trigger. It fires as soon as the safety goes forward. On the last occurrence a person was nearly hit. I DO NOT feel safe with this rifle. NO work has ever been done on it to my knowledge.

Please check out and get in contact with me.

Sincerely,

A.D. Elkins
