Remington Arms

I was unloading my 243 gun after a hunt. I pushed the bolt down half way to unload the shell. I was on the last shell out of the magazine, when I moved the bolt down half way - gun went off.

When the gun went off the shell shot through seat cover and back part of the frame of the seat and into a coat that was rolled up behind the seat. It was my brother-in-law's pickup.

I called in to Remington and they told me to send the gun in. This happened 12-14-02.

I'd like to know what you find out, why that shell went off - my finger was NOT on the trigger. My brother-in-law & I bought my/his 243 gun's at the same time - many yrs ago.

If you have any questions call me (605) 847-4528 C.S.T.
