RE00002694

Remington Arms

I was deer hunting on 11-16-99, as a Buck came my way I brought the gun up, as I pulled the trigger nothing happened it did not fire, as I brought the Rifle back to Rack another Round in, it went off, Oh me oh my, not my words of choice at the time, so I Racked Another Round in and again nothing happened, this time I looked at the Bolt and could see the Bolt Plug did not come back, the temp outdoors was 28°.

This Gun was sent to you back to Remington in 1996 or 97, at the time the Firing Pin Assembly was replaced, on my return home I called Remington and the person I talked to said that I needed to send the Gun back for a 2nd time, I have this Gun but one day someone or myself is going to get hurt or — I do not want to see this, nor does Remington Arms
