

Dear Sirs:

4#

Please repair trigger of premature hammer drop when safety is disengaged. Our gunsmith tightened trigger for customer but after a range session hammer again will start to drop and fire gun without pulling trigger. Customer found out about recall of gun so we are returning 600 Rem Ser # 666 8795 .308 for factory repair.

Trigger is tight now but might not be next week.

We witnessed gun going off 2 times when safety was pushed off. - Scared Hell out of us!

Any Questions, Please Call. 706-935-3771 "Gary"

Return to: Ga Gun Traders
