

Dear Remington Repair.

11-16-98

This gun fires when the safety is taken off.
It won't even latch the firing mechanism when
the bolt is cocked.

This gun is splitting shells. I would like to have
it rebarreled to .243 win. the shells are hard to find
in stores where I live. I would prefer no sights if it can be
rebarreled.

This gun was my grandpa's. so I would like to have
back with the barrel in .243. with no sights. the trigger
repaired and adjusted to ~~10~~ lbs pull or less.

Please call with estimate or send thru mail.

Sincerely
Jim Virgil
